

SLO Noor Clinic
Health Care for the Uninsured

**Lipid Panel Testing
and
French Hospital Medical Centers'
HeartAware Program Classes
team with
The SLO Noor Clinic**

Heart disease is America's number one killer of men and women, and half of those who suffer a heart attack don't even know they are at risk. Together, the SLO Noor Clinic and French Hospital Medical Center want to make sure you don't become a statistic.

Be Healthy. Be Aware!

We offer French Hospital's HeartAware program which incorporates Lipid Panel testing to help determine your heart disease risk factors and to help guide you through steps to lead a healthier lifestyle.

Here is what may happen:

Your Noor Clinic physician may refer you to the Lipid Panel testing on the last Friday of the month. During that 15 minute appointment, a nurse will do a fasting lipid panel using a fingerstick test. She will then explain your results to you; help you set goals for lifestyle changes to reduce your risk for heart disease; and make recommendations for follow-up testing or treatment with your Noor Clinic physician.
